6/1	1201	23	8103	146	169	13.6%

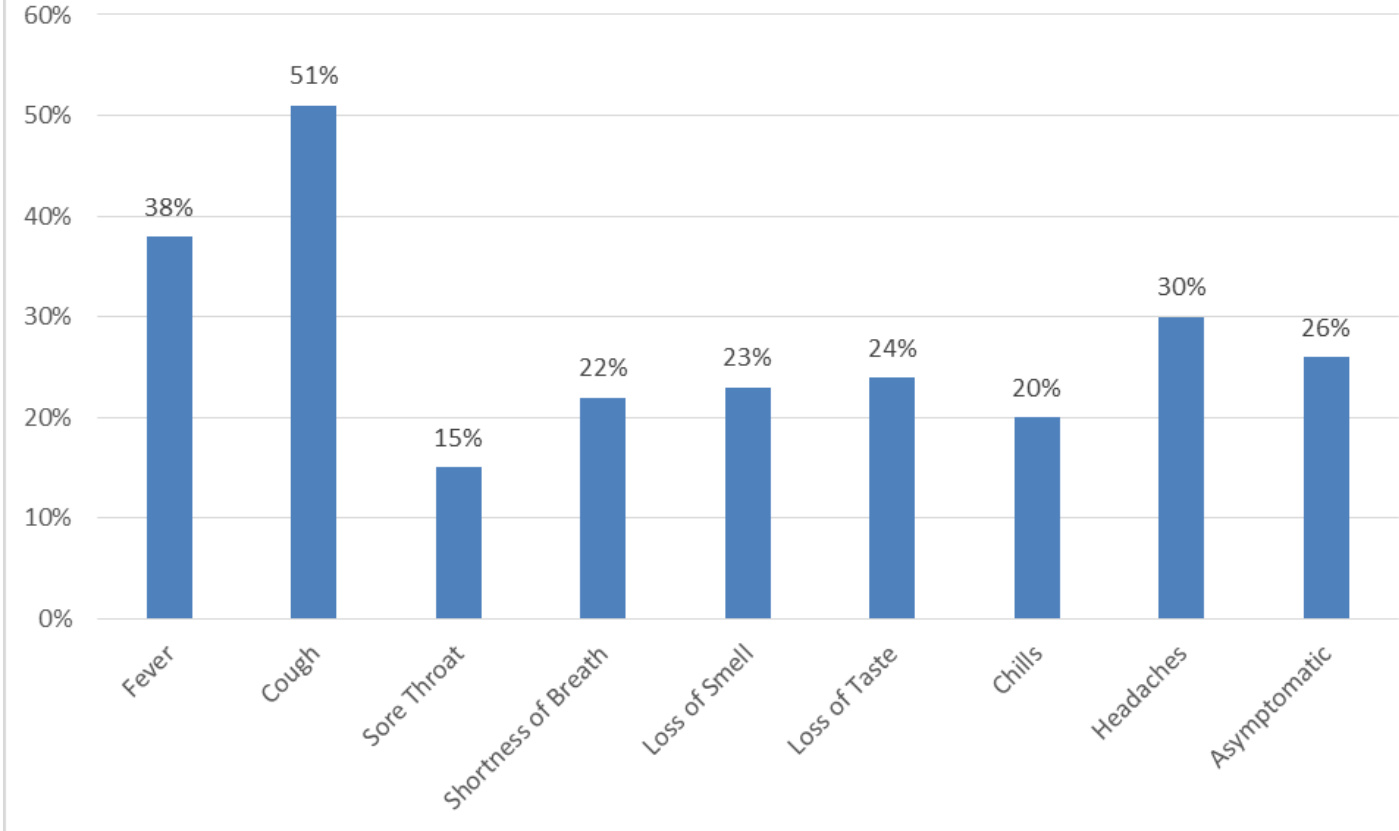

## WI DHS UPDATES

- Survey for the Health of Wisconsin (SHOW) is planning on conducting population based serological surveillance for COVID-19. Antibody testing will provide an opportunity to understand how the virus has spread through the Wisconsin population and identify locations with under-reported cases. The addition of a serological assay can validate exposures and help with moving forward in understanding important aspects of the prospects for herd immunity and risk of future infection from a SARS-CoV-2 like infection in the future. They will be sending invitations to past SHOW participants with hopes of recruiting up to 2000 past participants to provide blood samples. The surveillance will include a short blood draw and the blood will be sent directly to the WI state laboratory of hygiene for antibody testing. They are only conducting antibody testing at this time.
- CDC has updated isolation and quarantine guidance for the infectious period for asymptomatic individuals (again) to 2 days before and 10 days after specimen collection. The [Contact Risk Assessment Flowchart](#) has been updated on the PCA Portal as a result of this updated CDC Guidance.
- [DHS COVID-19 Outbreaks](#) page now includes percent of COVID-19 cases by recovery status by county.

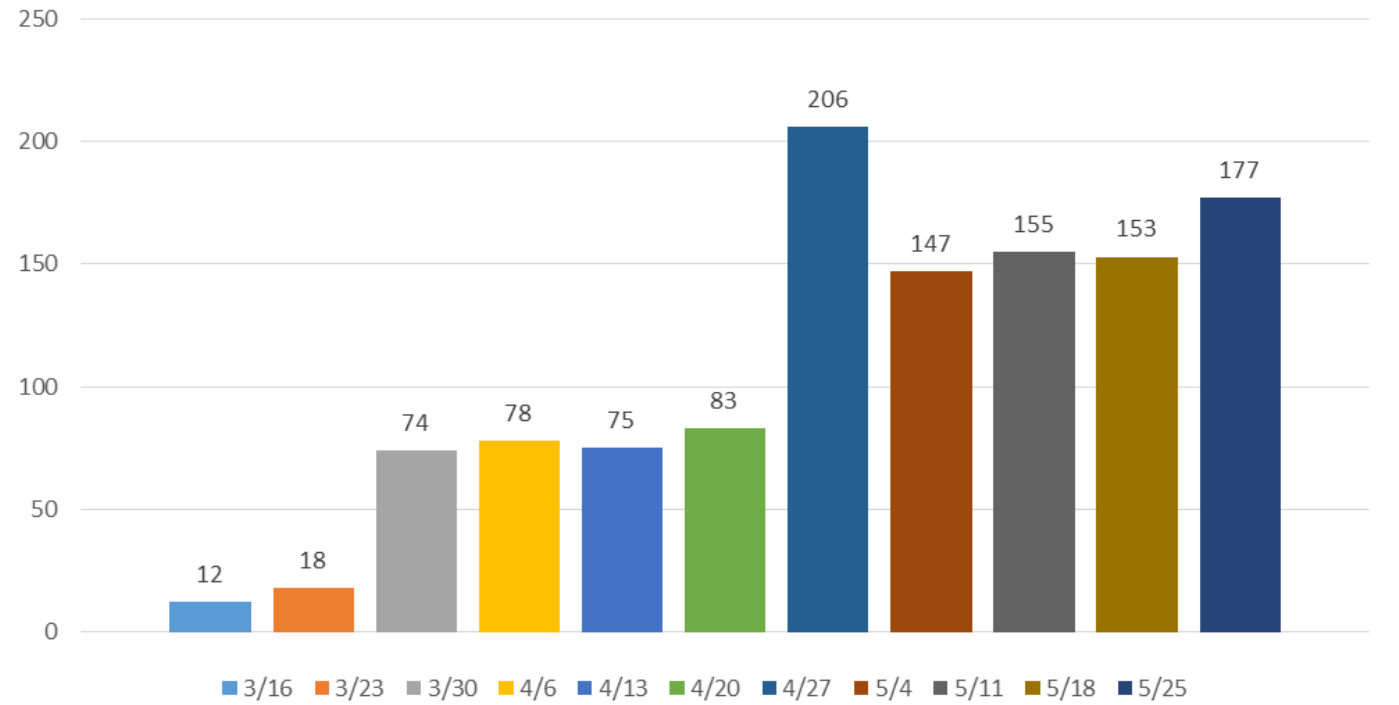

## Kenosha County Positive COVID-19 Cases Percent Who Had the Following Symptoms

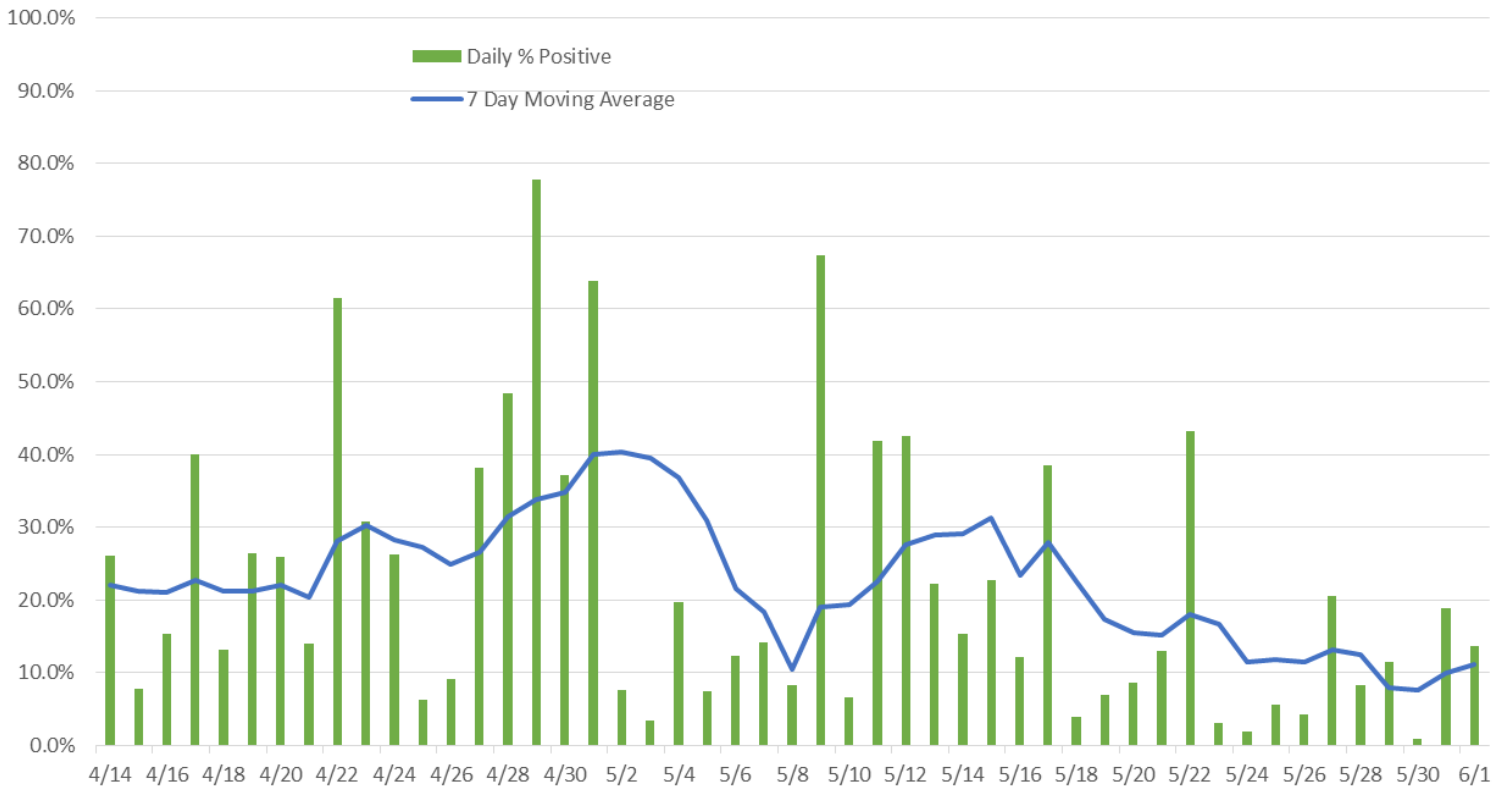

June 1, 2020 - Total of 1,187 Cases

## Kenosha County COVID-19 Weekly Positive Cases

### Kenosha County COVID-19 Percent of Daily Positive Tests

### Kenosha County COVID-19 New Hospitalizations
